

A Complete Package

Point-of-Rental™ Systems is a complete rental management system designed to handle your entire event cycle. From quote to reservation to item prep to delivery and invoicing, Point-of-Rental's automated functions provide a seamless process that can define success for your company.

Using Microsoft Windows®, Point-of-Rental's award-winning Enterprise Software is flexible and intuitive, combining thirty years of experience with the latest technological advances. Yearly revisions keep your business up-to-date with cutting edge enhancements specifically designed for the event rental industry.

"Thank you for being the most proactive, responsive, cutting edge...software company that I have ever dealt with. I will continue to sing your praises to anyone who has not purchased the ONLY rental software that should be chosen."

—Sherri Creighton, Pleasanton Party Rental

POINT-of-RENTAL™ Systems

Empowering the Event Rental Industry

Innovative Design

Point-of-Rental™ Systems equips you with the tools needed to turn quotes into revenue and increase overall profits. Important features include the ability to directly fax and e-mail rental contracts, purchase orders, and subrental orders, automate invoicing, and schedule auto generated reports internally to staff and externally to customers. Point-of-Rental can also import inventory from PartyCad drawings and export daily entries to PC based general ledgers such as QuickBooks, Microsoft Dynamics, and many others. With attention to detail, the software provides item question fields that force sales personnel to ask important questions like: "What type of surface will the tent be setup on? Is lighting required? Will power lines interfere with setup?" And since a website can make or break a business, Point-of-Rental offers a fully integrated website option with a user-friendly shopping cart. Best of all, Point-of-Rental software automates many event industry processes, eliminating the potential for human error.

Automated Processes

"This [E-Invoicing] is an automated process that happens every night and has worked remarkably well. No more printing invoices, stuffing envelopes and licking stamps!" —Thomas Pollard, Special Event Rentals

Reservations

- Real-time inventory tracking
- Automated status notifications
- Automated verification process
- CRM functionality
- Internal & external ticklers

Critical inventory notifications

- Integrated overbooking handling
- Integrated subrental process
- Integrated purchase orders

Automated Item Prep

- Prep orders generated by department

Change orders by department

- System generated packing labels

Logistics

- Paperless routing
- On-time routing
- Loading manifests
- Single-click driver packets
- GPS integration

Real-time arrival/departure time stamps

- Real-time route statuses for customer service

Closing Process

- Real-time inventory control
- 100% Accurate invoicing via FAX, email, or USPS

Intelligent Features

■ Using real-time inventory availability to create reservations, Point-of-Rental software assists in substitutions and suggestions.

■ When overbooking is necessary, subrental and purchase requests can be created at any point, giving you the flexibility needed to make intelligent decisions.

■ Utilizing Venues enables notifications to the sales person about specific site requirements to communicate to the customer and assess charges if applicable.

■ Item prep manifests are generated per operational department. Once in prep, all changes are tracked and reported in real-time, eliminating the need for your sales staff to manually walk change orders through the operational process and ultimately ensuring accurate orders for your customers.

■ Using the Dispatch Center, loading plans and delivery routes can be pre-planned using detailed real-time on-screen information in place of static printed copies of contracts.

■ Automated contract sorting gives customers and employees a consistent item sort. Plus, automatic load slips for Will-Calls print to any printer specified.
